ISS YACHTS

STOCKTAKE YOUR BOAT GEAR
IN THE BLINK OF AN EYE

CONTROL   SECURITY   OPTIMISATION

Challenges

- Demanding customers expecting swift and simple boat return procedures

- Sophisticated and expensive boat equipment requires accurate and exacting asset management

- In a competitive market, cost reduction is key to retaining profits

The concept

ISS Yachts is a RFID (Radio Frequency Identification) based tool which allows you to instantly check the status and location of all tagged inventory items in multiple (separate) areas.
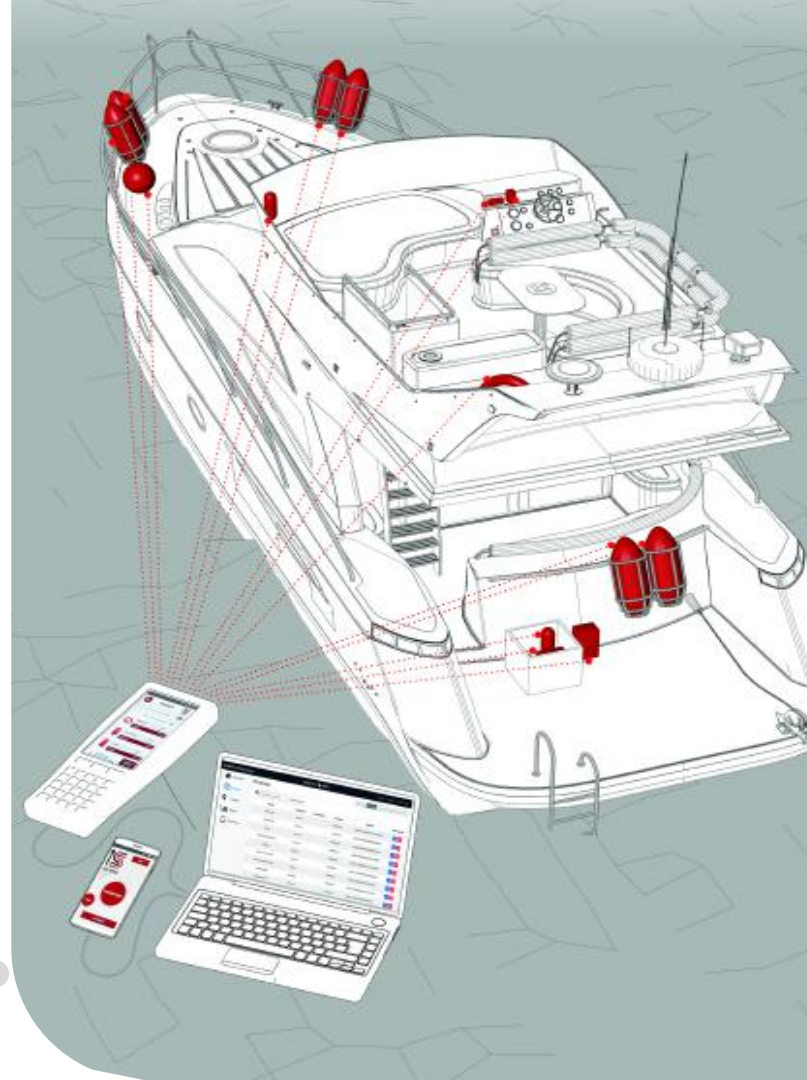

How it works

The RFID scanner receives signal reflections from all tagged items.

The results are shown on the hand-held scanner display.

The report is transmitted via the internet to a cloud-based management software.

SOLUTIONS

Key benefits

- Simple to implement and operate

- Substantial time savings – allow staff cost reduction

- Highly automated process (no human error)

- Remotely controllable results

- Easy management of detailed reports (statistics, process improvement opportunities)

- Industry leading technology

About us

- Best Startup 2018
  in Space³ac programme

- Participant in the EU INNOship
  programme

- Cooperating with the best
  technical universities in Poland

- Implemented an intelligent inventory
  system in one of
  the most modern storage facilities
  in Europe – Rossmann GmbH

Inventory smart system for Yachts is a RFID based tool which allows you to instantly check the status and location of all tagged inventory items in multiple locations.
